                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1464                                                                                                                                                                                                                                                         Sequence 1, Application US/09299549
Patent No. 6136547
GENERAL INFORMATION:
APPLICANT: Tartaglia, Louis A.
APPLICANT: Weng, Xun
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING
TITLE OF INVENTION: GLUTEX AND USES THEREOF
NUMBRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson P.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        CITY: Boston

"Human TRICH-6 protein" Location/Qualifiers 100. .1350 /*tag= a /product= 100.210 sig_peptide

The present sequence is transporter and ion channel-6 (TRICH-6) cDNA.

TRICH is used as vaccine. TRICH is useful for treating a disease or condition associated with decreased expression of functional TRICH, such as transport disorder including amyotrophic lateral scletcsis, cystic fibrosis, Becker's muscular dystrophy, Charcot-Marie Tooth disease, Duchenne muscular dystrophy, andina and hypertension, neurological disorders including Alzheimer's disease, amnessa, bipolar disorder, dementia, depression, epilepsy, ischaemic cerebrovascular disease and stronger, cerebral neoplasms, Pick's disease, mental disorder; muscle of stronger, schaemic disorder; muscle mood, anxiety, Schizophrenia and seasonal affective disorder; muscle disorder including AlDS, actionyopathy, myocarditis, polymyositis, cardiomyopathy, myocarditis, polymyositis, anthythmias and asthma and immunological disorders including AlDS, adult respiratory distress syndrome (ARDS), allergies, anemia, diabetes mellitus, rheumatosid archritis, scleroderam, Sjogren's syndrome, systemois and asthma and archmitis, scleroderam, Sjogren's sickle cell anaemia, Wilson's disease, cataracts, infertility, pulmonary archer stenosis, Grave's disease, cataracts, infertility, pulmonary archer stenosis, Grave's disease, cataracts, infertility, pulmonary archer stenosis, Grave's disease, cataracts, infertility, bulmonary archer stenosis, and viral, bacterial, tungal, helminthic and procozoal cinfections. TRICH DNA is useful in gene therapy and in diagnostic 277 TTCCTCTACGCTACAACCTGTCGGTGGTGATGCCCCCACCCCGTACATCAAGGCCTTT 336 277 racaardadreardedaaadaaddearddacdrecaaradaceeadacacrerdacrrrc 336 Novel human transporter and ion channel proteins useful for treating and preventing transport, neurological, muscle and immunological disorders. 2003-221607/21. P-PSDB; ADC26265. New isolated NOVX polypeptide, useful for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, and for treating or preventing cancer.

Claim 20; SEQ ID NO 89; 478pp; English.

The invention relates to a novel isolated NOV polypeptide. The polypeptide of the invention demonstrates cytostatic activity and may be used for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, including metabolic disorders, immune disorders, neurodegenerative disorders, circulatory diseases, haemopoietic disorders, wasting diseases and cancer. The polypeptide may also be utilised during gene therapy procedures, vaccine development and transgenic animal production. The current sequence is that of the human NOV DNA of the invention.

WPI; 2003-221607/21. P-PSDB; ADC26253. New isolated NOVX polypeptide, useful for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, and for treating or preventing cancer.

Claim 20; SEQ ID NO 77; 478pp; English.

The invention relates to a novel isolated NOV polypeptide. The polypeptide of the invention demonstrates cytostatic activity and may be used for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, including metabolic disorders, immune disorders, neurodegenerative disorders, circulatory diseases, haemopoiatic disorders, wasting diseases and cancer. The polypeptide may also be utilised during gene therapy procedures, vaccine development and transgenic animal production. The current sequence is that of the human NOV DNA of the invention.

The invention relates to a polynucleotide comprising a sequence given in the specification, or its mature protein-coding portion, or its complement. The polynucleotide is useful for treating diseases e.g., cancer or neurodegenerative diseases and many others listed in the specification. The present sequence represents a novel human cDNA. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030104529. polynucleotide, useful for treating diseases e.g., cancer or Claim 1; SEQ ID NO 574; 99pp; English. neurodegenerative diseases. The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to production of other cytokine or cell differentiation or which may induce production of other cytokines in other cell populations. The polymetides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, immunomodulatory activities activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, archiritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                              Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.
                                                                                 ZW;

WPI; 2003-221607/21. P-PSDB; ADC26251. New isolated NOVX polypeptide, useful for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, and for treating or preventing cancer.

Claim 20; SEQ ID NO 75; 478pp; English.

The invention relates to a novel isolated NOV polypeptide. The polypeptide of the invention demonstrates cytostatic activity and may be used for determining the presence of, or predisposition to a disease associated with altered levels of expression of the polypeptide, including metabolic disorders, immune disorders, neurodegenerative disorders, circulatory diseases, heemopoletic disorders, wasting diseases and cancer. The polypeptide may also be utilised during gene therapy procedures, vaccine development and transgenic animal production. The current sequence is that of the human NOV DNA of the invention.

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system diseases, such as localised neuropathies and central nervous system suppression, atteral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and constitutions and inflammation, leukaemias and constitutions.
                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             143

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to polymucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferentiation or which may induce production of other cytokines in other cell populations. The polymetrides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, vaccines or e.g. stem cell growth factor activity, nematopoiesis regulating activity, issue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication

sequences ABB10381-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA03574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of identifying compounds which bind to polypeptides in sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities, stem cell growth factor activity; hammatopoiesis regulatory activity; tissue growth activity; chammatopoiesis regulatory activity; tissue growth activities; chemotactic or chemotactic activities; hammanoadulatory activity; activin- or inhibin-related activities; chemotactic or chemotactic activities; hammanoatulator, activity; chammanoadulator, activities; receptor or lingand activities; or may be

New human transporters and ion channels (TRICH) polypeptides useful for diagnosing, treating or preventing disorders associated with aberrant expression of TRICH.

Claim 11; Page 207-208; 210pp; English.

The invention relates to human transporters and ion channels (TRICH) polypeptides and their CDNA molecules. The nucleic acid and polypeptide sequences are useful in the diagnosis, treatment, and prevention of disorders associated with transport (akinesia, cystic fibrosis, Bell's palsy, amyotrophic lateral sclerosis); neurological (Alzheimer's disease, ameschiat, demestria, pimmunological (Alba, Addison's disease, amesche (artiomyopathy, mycarditis, undefnences asthma); cell proliferative disorders (cancers, leukaemia, psoriasis); cardiac disease (anglna, hypertension, or bradyarrythmia) and in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of transporters and ion channels. The polymucleorides may be used to detect and quantify gene expression in disease, to generate hybridization probes for mapping naturally occurring marrens, and in drug screening. The present sequence is human marrens. genomic sequer TRICH-25 cDNA

aberrant hexose transport. The GLUTX polypeptide is useful for determining whether a given disorder is associated with aberrant expression of GLUTX or activity of GLUTX. The nucleic acid molecule and the GLUTX polypeptide are useful as diagnostic or therapeutic agents, or they can be used to generate antibodies or identify small molecules that in turn are clinically useful. The GLUTX nucleic acid molecules are useful for identifying the chromosomal location of GLUTX and as tissue-
                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CGCTACCTGCTCTTGCAGAGAGACAACGAGGCAAGAGCTGTGAAAGCCTTCCAAACGTTC

(MILL-) MILLENNIUM PHARM INC.

A novel mammalian transporter protein and the gene encoding it, are useful in the diagnosis and treatment of disorders associated with aberrant sugar transport.

Claim 2; Fig 1A-E; 48pp; English.

This cDNA encodes a human glucose transporter (GLUTX) protein. The protein can be expressed by standard recombinant methodology. GLUTX nucleic acids are useful as hybridization probes for detecting the presence of GLUTX DNA in a sample, useful for diagnosing conditions associated with aberrant expression levels of GLUTX. The GLUTX gene is

as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                    NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RP11-751L19;
actual end is at base position 165221 of RP11-751L19.
                                                                                                   Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. I MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence of AC068403 has been incorporated into AC098976.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

Center: Washington University Genome Sequencing Center Center code: WUGSC Web site: http://genome.wustl.edu/gsc

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
